

Secure remote access to your organization's essential networks and resources

SafeWord 2008's out-of-the-box One-Time-Password (OTP) two-factor authentication solutions let you powerfully secure remote access to your organization's most sensitive and confidential resources and applications. Offering both hardware and software, and supported by user-friendly management software and maintenance tools, SafeWord 2008's all-in-one OTP authentication solutions are easy to install, use and manage.

Core Benefits

- recognized as the easiest solution to administer, manage and use for Windows environments
- installs in minutes right out-the-box
- cost effective with a low Total Cost of Ownership (TCO)
- mix of hardware and software authenticators offers flexibility and scalability
- tokens never expire and come with a lifetime warranty *
- integrates seamlessly with Microsoft Active Directory tools, and offers easy and intuitive administration
- meets regulatory compliance initiatives

* for tokens under a valid support contract

"Peace of Mind" Security at the Push of a Button

With the push of a button, SafeWord authentication devices generate a highly secure, one-time password (OTP) that can never be re-used, hacked, or compromised. SafeWord 2008's two-factor authentication ensures that only properly authenticated users can access critical applications and data. SafeWord 2008 offers a variety of authenticator options, including hardware authenticators and MobilePASS software authenticators.

eToken PASS

eToken PASS is a compact and portable one-time password (OTP) authenticator that provides strong user authentication to network resources. With eToken PASS, your organization can enable employees, customers, and partners to securely access data whenever they wish using any computer. eToken PASS supports both remote access and proximity solutions, is OATH compliant, is available in both time and event-based configurations, and can be used for strong authentication to web and client-based applications.

Gold

The Gold authenticator offers highly effective strong two-factor authentication with the added security of a challenge/response mechanism. A user first activates the authenticator on the keypad with a personal identification number (PIN), which prompts the authenticator to provide a one-time, dynamic password. The user then enters the password into the Web or network application to perform authentication. The Gold authenticator comes in a convenient keyfob package, and includes a large, user-friendly display.

MobilePASS Software Authenticators

SafeWord's MobilePASS combines the security of proven two-factor authentication with the convenience and cost-effectiveness of software-based one-time passwords generated on PCs or popular mobile device platforms, including: iPhone, BlackBerry, Windows Mobile, and Java ME-enabled devices. MobilePASS also offers SMS-text message delivery of one-time passwords to mobile devices. MobilePASS is a fully-integrated strong software authentication solution that leverages the same trusted authentication platform as our hardware-based solutions.

Evolves with your Business Needs

Your business needs will evolve and grow into tomorrow, and that's why SafeWord 2008 can migrate seamlessly to additional SafeNet management platforms. This flexibility allows you to expand your current authentication setup and add advanced certificate-based security applications such as digital signatures, pre-boot authentication and password management solutions, without having to replace your current authentication infrastructure.

Meet Industry Security and Privacy Compliance

SafeWord 2008's strong authentication, access control, audit logging and comprehensive reporting capabilities enable your organization to meet compliance requirements for security and privacy standards including:

- Payment Card Industry Data Security Standard (PCI)
- Health Insurance Portability and Accountability Act (HIPAA)
- Federal Financial Institutions Examinations Council (FFIEC)
- Homeland Security Presidential Directive 12 (HSPD-12)
- Sarbanes-Oxley Act (SOX)
- Gramm-Leach-Bliley Act (GLBA)

The SafeNet Family of Authentication Solutions

SafeNet's suite of authentication solutions includes certificate-based, OTP, hybrid and software authenticators. All authenticators, together with SafeNet's extensive management platforms and security applications, empower you to:

- **Conduct business securely and efficiently** and open new market opportunities with innovative products that enable secure remote access and advanced security applications such as certificate-based authentication, digital signing and pre-boot authentication.
- **Reduce risk** with strong authentication solutions that prevent fraud and data theft and enable compliance to industry regulations.

To learn more about SafeNet's complete portfolio of authentication solutions, please visit our website at www.SafeNet-inc.com

Lifetime Token Warranty

SafeWord 2008 authenticators never expire and come with a lifetime token warranty. SafeWord eliminates the need to replace and deploy new authenticators every three years and helps reduce your total cost of ownership. Simply return authenticators at any time for a free replacement. You must be current on your support contract for all of your users to be eligible.
