

Software generated One-Time Passwords for convenient and secure two-factor authentication

Key Benefits

- enables secure remote access to online services and applications
- facilitates compliance with privacy regulations
- convenient, simple and easy to use
- simple Over-the-Air deployment, installation and user self-activation
- no additional hardware to carry around or risk losing
- compliments SafeNet's broad range of OTP and certificate-based authentication solutions
- reduce help desk costs with over-the-air deployment and enrollment capabilities
- available with extensive management platforms for centralized administration, provisioning, deployment and revocation

SafeNet's MobilePASS family of One-Time-Password (OTP) software authentication solutions combines the security of proven two-factor strong authentication with the convenience, simplicity and ease of use of OTPs generated on personal mobile devices or PCs.

Easily and Securely Expand Online Services

MobilePASS's innovative technology generates highly secure one-time passwords on mobile devices and PCs for each user login, allowing your organization to securely expand the range of online services offered to employees, customers and partners.

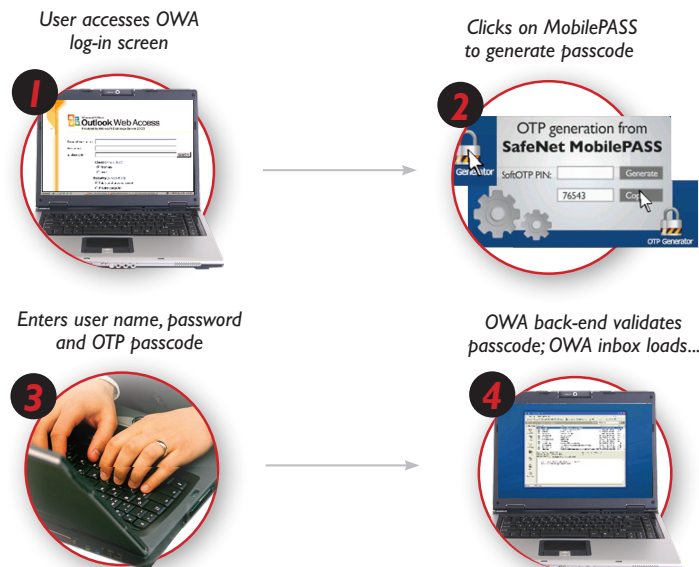

A Superior, Cost-Effective Solution

MobilePASS's OTP two-factor authentication conveniently supports mobile devices including iPhone, BlackBerry and Windows Mobile platforms as well as Windows desktops. For additional flexibility, it also supports SMS delivery to mobile devices when used with the SafeWord 2008 packages.

Powerful Protection and Access Control for Remote Access

MobilePASS provides powerful identity protection and convenient access control for all types of remote access systems, such as VPNs, Terminal Server and Citrix applications, and Outlook Web Access. It also supports access to customer-facing online services, such as e-banking sites, eLearning education portals and healthcare record and information sites.

MobilePASS is convenient and easy to use:

Central Management for Easy Deployment and Administration

MobilePASS is available with the SafeWord 2008 "out of the box" management package or with the more extensive eToken TMS management platform.

MobilePASS with eToken TMS

When deploying MobilePASS with eToken TMS, organizations get a fully configurable enterprise-level management platform that offers centralized control of all authentication devices. Offering seamless integration with Microsoft Active Directory and other repositories such as SQL or LDAP, eToken TMS reduces the IT overhead associated with managing authenticators by streamlining all authentication operations, including deployment, provisioning and ongoing maintenance.

MobilePASS with SafeWord 2008

SafeNet's easy to use SafeWord 2008 authentication package empowers organizations to set up strong authentication in a matter of minutes. Easy administration and management through Active Directory as well as Over-the-Air deployment and activation for iPhone and BlackBerry, make SafeWord 2008 the perfect secure remote access solution for Windows desktops and mobile platforms.

MobilePASS SMS Delivery

MobilePASS with SafeWord 2008 also offers organizations the additional option of Out-of-Band (OOB) authentication by supporting SMS password delivery to mobile devices. SMS delivery features include:

- Zero footprint with no client installation required
- Direct lookup of users' phone or email in Active Directory
- Supports email SMTP password delivery in addition to SMS delivery
- Supports password expiration for improved security

The SafeNet Family of Authentication Solutions

SafeNet's suite of authentication solutions includes certificate-based, OTP, hybrid and software authenticators. All authenticators, together with SafeNet's extensive management platforms and security applications, empower you to:

- **Conduct business securely and efficiently** and open new market opportunities with innovative products that enable secure remote access and advanced security applications such as certificate-based authentication, digital signing and pre-boot authentication.
- **Reduce risk** with strong authentication solutions that prevent fraud and data theft and enable compliance to industry regulations.
